

The main findings of the NZ-SOLAS experiment FeCycle are now published in a special section of Global Biogeochemical Cycles – in the December 2005 edition and are also available on the AGU website as pdf's.

We have a voyage entitled N-Cycle taking place in the subtropical water mass NW of New Zealand in March 2006. We will attempt to quantify the relative importance of N supply to the upper ocean via N fixation, atmospheric N deposition and internal wave activity.
